The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/748,871

Applicant(s)

KIM ET AL.

Examiner

ASHER KHAN

Art Unit

2481

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 8/11/2010.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-56 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-56 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-8508)

- 6) ☐ Other: _____

DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claim1-56 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claim 1-3, 5, 9, 12-17, 19-24, 28-29, 32, 36, 39-44, 46-51 and 55-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" and in further view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley".**

As to Claims 1 and 3, Chan discloses an image recording/reproducing apparatus which records and reproduces a plurality of still image files and sound files with respect to a recording medium and provides a display apparatus with a screen of play list indicating sound files being currently reproduced, the recording/reproducing apparatus comprising:

a decoder (Fig. 6, Processor chip 100) decoding the still image files and the sound files recorded in the recording medium (0020;Abstract);

a memory (DRAM 500) for storing the still image files and the sound files as decoded (0024); and

Chan does not expressly disclose a main control unit for performing a process operation such that, a display menu in a first predetermined area of the screen of playlist, where in the a display menu comprises at least one instruction icon to both set a reproduction mode and command a reproduction of an alternating display such that the plurality of still image files recorded in the recording medium are alternately and automatically displayed, and when the instruction icon of the display menu is selected during the reproducing of the sound files stored in the memory, the plurality of still image files recorded in the recording apparatus are decoded and stored in the memory while the decoder is being idle, and one or more files among the stored still image files are alternately displayed on a second predetermined area of the screen of play list indicating sound files as commanded by the selection of the instruction icon.

Wolff discloses a main control unit (Processor, 701) for performing a process operation such that, a display menu in a first predetermined area (Fig. 1, 102) of the screen of playlist, a display menu (Fig. 1, 115) comprises an alternating display (Fig. 1, 103; A play button is used to enter a play mode to allow an individual to view existing stories i.e. alternating display and the system starts play back from the currently selected thumbnail image and automatically plays other images related to the selected stories; Col. 7 lines 37-40) such that the plurality of still image files recorded in the recording medium are alternately and automatically displayed (after instruction of playing a story by selecting 115 icon images i.e. instruction icon images related to the

story are alternately and automatically displayed; Col. 7, lines 50-53), and when the instruction icon (image icons in Fig. 1, 115) of the display menu is selected during the reproducing of the sound files stored in the memory (Col. 7, lines 56-63), one or more files among the stored still image files (Stories, Fig. 1, 110) are alternately displayed on a second predetermined area (Fig. 1, 103 and 104) of the screen of play list indicating sound files as commanded by the selection of the instruction icon (Fig. 1, 104; Col. 7 line 64-67, Col. 8, lines 1-5; when stories contain audio files they are shown in area 104).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories. Resulting in a system that is able to save time for the user.

Chan and Wolff as modified do not expressly disclose the plurality of still image files recorded in the recording medium are decoded and stored in the memory while the decoder is being idle.

Li discloses that the plurality of still image files recorded in the recording medium are decoded and stored in the memory while the decoder is being idle (Fig. 5;0021-0029; If "L" is less then the value of "N" Master decoder has enough buffering length to decode and master decoder decodes while the Secondary decoder is idle.)

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan and Wolff as modified with the teachings of Li. Motivation to

combine would have been to increase the decoding efficiency by providing two decoding units instead of one decoder. Resulting in a system that is able to decode faster saving a viewer time.

However Chan, Wolff and Li as modified do not expressly disclose at least one instruction icon to both set a reproduction mode and command a reproduction of an alternating display.

Rowley discloses at least one instruction icon (e.g. play command button) to both set a reproduction mode and command a reproduction of an alternating display (“...the play command button 701 starts a timer and displays the web pages in a slide show format ...”, Paras. 0041, 0051; It is noted that the play button command sets reproduction mode i.e. display process of slideshow and advances display from page to page causing an alternating display automatically).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Rowley. Motivation to combine would have been to provide on the display device an icon such that it is able to reproduce a slideshow. Resulting in a system that is able to reproduce with the use of a simple mouse operation making the system user friendly.

As to claim 2, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein the main control unit further performs a process operation such that the plurality of still image files, which are recorded in the same folder (Fig. 5A and 5B; meta3.xml, 520) as the

sound files of the sound file list, are decoded when the display menu is selected (Figs. 4, 5A, 5B; Col. 10, lines 25-44).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan and Li as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories. Resulting in a system that is able to save time for the user.

As to claims 5 and 32, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further performs a random access capable of displaying or reproducing a file selected by a user from among a plurality of image files recorded in a recording medium by quickly reading the selected file (Abstract; 0037).

As to claims 9 and 36, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further continuously reproduces a plurality of image files recorded in a recording medium in an order of storage in the recording medium (0037).

As to claim 12 and 39, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further enables a user to recognize a folder in which a presently displayed file is located by providing a play list menu (Fig. 6;0036).

As to claim 13 and 40, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the

main control unit further displays a 'Play List' of an image file recorded in a recording medium on a screen, and selects the file using the displayed 'Play List' (Fig. 6 and 0037).

As to claims 14 and 41, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further displays a plurality of diverse still picture files while a music file is reproduced to provide the music replay and the plurality of diverse still picture files at the same time (0037).

As to claims 15 and 42, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the pluralities of diverse still picture files are provided as a slide show (Abstract; 0038).

As to claims 16 and 43, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further automatically reproduces a plurality of files when a recording medium containing the files is inserted, independent of the kinds of files (0038).

As to claims 17 and 44, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further displays additional information on a music CD on a screen when reproducing the music CD to allow a user to acquire the information on the music CD and select a desired song (Fig. 6; 0039).

As to claims 19 and 46, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the

main control unit further compresses and stores audio data having a CD- DA standard (0027).

As to claims 20 and 47, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein the main control unit further adaptively adjusts a size of a still picture based on a size of a predetermined display area and displays the still picture in the predetermined display area (Col. 6, lines 8-15).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Li and Rowley as modified with the teachings of Wolff. Motivation to combine would have been to adjust the screen size of the display area so that appropriate size of picture could be displayed to a viewer.

As to claims 21 and 48, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein said displayed still picture is provided having at least one of an aspect ratio and a display size suitable to the display area (Fig. 1, 103 area has aspect ration and a display area).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Li and Rowley as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

As to claims 22 and 49, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein the

main control unit further provides a menu for enabling a user to easily select and manipulate functions supported by the image recording/reproducing apparatus (Fig. 1; Col. 5, lines 53-63).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Li and Rowley as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

As to claims 23 and 50, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein the main control unit further reproduces a recorded program from a beginning, while also continuously recording an externally-received program during a time-delay viewing function (Col. 5, lines 53-63).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan and Li as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

As to claims 24 and 51, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein the time-delay viewing function comprises a process operation such that an externally-

received program is both recorded and reproduced at the same time (Col. 5, lines 53-63).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Li and Rowley as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

As to claims 28 and 55, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further selects files of certain folders for display in a file list (disk information) and selects files of other folders (Aux. Reader information) and different types of recording medium for additional display in the file list (Fig. 6; 0036).

As to claim 29 and 56, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff wherein the main control unit further performs a process to decode a plurality of still image files which are recorded in a folder (meta3.xml, 520; Fig. 5B) in which a plurality of sound files of a sound file list are also recorded when display menu (Fig. 1, 102) is selected (Figs. 1, 5A and 5B; Col. 10, lines 25-44).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Li and Rowley as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can

simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

3. Claim 4, 30 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent Pub 2002/0033889 At to Miyazaki.

As to claims 4, 30 and 31, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses further comprising the step of: displaying the plurality of still image files are displayed on the second predetermined area according to the set period (Fig. 2, 250) but does not expressly disclose displaying a screen of period setting menu for setting a display period of the plurality of still image files when the display menu of the screen of play list is selected.

Wolff discloses further comprising the step of: displaying the plurality of still image files are displayed on the second predetermined area according to the set period (Col. 7, lines 34-60).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Li and Rowley as modified with the teachings of Wolff. Motivation to combine would have been to provide modeless interface where a user can

simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

Miyazaki discloses displaying a screen of period setting menu for setting a display period of the plurality of still image files when the display menu of the screen of play list is selected (Fig. 17;0119).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Miyazaki. Motivation to combine would have been to provide a control to a user to be able to set a time period to view an image for as long as the user deems necessary.

4. Claim 6 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent Pub 2001/0056434 A1 to Kaplan et al. "Kaplan".

As to claims 6 and 33, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. However Chan, Wolff and Li as modified do not expressly disclose wherein the main control unit further corrects a name of an image file recorded in a recording medium to allow a user to easily search for a desired file.

Kaplan discloses wherein the main control unit further corrects a name of an image file recorded in a recording medium to allow a user to easily search for a desired file (0007; 0039; 0059-0061).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Kaplan. Motivation to combine would have been to keep track of and organize files containing multimedia content.

5. Claim 7 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent Pub. 2002/0136539 A1 to Nakaya.

As to claims 7 and 34, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. However Chan, Wolff and Li as modified do not expressly disclose wherein the main control unit further reproduces and displays a plurality of moving picture files recorded in a recording medium on a file list menu as moving pictures to allow a user to easily search for the image file recorded in the recording medium.

Nakaya discloses wherein the main control unit further reproduces and displays a plurality of moving picture files recorded in a recording medium on a file list menu as

moving pictures to allow a user to easily search for the image file recorded in the recording medium (0049, 0066, 0079; Fig. 6A or 6B).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Nakaya. Rationale to combine would have been that all claimed elements were known in the prior art and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yielded predictable results to one of ordinary skill in the art at the time of invention.

6. Claim 8 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent Pub. 2002/0012522 A1 to Kawakami et al. "Kawakami"

As to claims 8 and 35, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Chan discloses wherein the main control unit further displays a list of image files recorded in a recording medium (Fig. 6).

Chan, Wolff and Li as modified do not expressly disclose displaying plurality of icons according to a kind of image file to illustrate the kind of image file.

Kawakami discloses displaying plurality of icons according to a kind of image file (thumbnail image) to illustrate the kind of image file (0335).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Kawakami. Motivation to combine would have been to cause a user to visually recognize types of files to which the images correspond.

7. Claim 10,11, 37 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent Pub. 2003/0123853 A1 to Iwahara et al. "Iwahara"

As to claim 10 and 37, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. However Chan, Wolff and Li as modified do not expressly disclose wherein the main control unit further edits an image file.

Iwahara discloses wherein the main control unit further edits an image file (Fig 34B; 0268-0270).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Iwahara. Rationale to combine would have been that all claimed elements were known in the prior art and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yielded predictable results to one of ordinary skill in the art at the time of invention.

As to claim 11 and 38, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. However Chan, Wolff and Li as modified do not expressly disclose wherein the main control unit further partially deletes a moving picture.

Iwahara discloses wherein the main control unit further partially deletes a moving picture (Fig 34B; 0268-0270).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Iwahara. Rationale to combine would have been that all claimed elements were known in the prior art and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yielded predictable results to one of ordinary skill in the art at the time of invention.

8. Claim 18 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent 7,315,389 to Kuwata et al. "Kuwata"

As to claims 18 and 45, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. However Chan, Wolff and Li as modified do not expressly disclose wherein the main control unit further skips and copies a plurality of files having a same file name when a plurality of files recorded in an

optical recording medium (source) are copied into a mass storage magnetic recording medium.

Kuwata discloses wherein the main control unit further skips and copies a plurality of files having a same file name when a plurality of files recorded in an optical recording medium (source) are copied into a mass storage magnetic recording medium (Destination) (Col. 9, lines 48-67); .

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Kuwata. Motivation to combine would have been to save space in memory by saving data files that are different from other data files. Resulting in a system that is able to save memory for a user.

9. Claim 25 and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent pub. 2002/0141580 to Okuyama.

As to claims 25 and 52, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. However Chan, Wolff and Li as modified do not expressly disclose wherein the main control unit further automatically picks up a title name of a DVD program and records the picked-up title onto a user data area when copying the DVD program onto a HDD.

Okuyama discloses wherein the main control unit further automatically picks up a title name of a DVD program and records the picked-up title onto a user data area when copying the DVD program onto a HDD (0042; It would be obvious to one of ordinary skill in the art to save the data in a title in the of DVD program and it would be design choice to choose a name that data was originally recorded in).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Okuyama. Motivation to combine would have been to provide a recording system that is able to record programs from one medium to other. Thus giving a user more control over their recording and reproducing device.

10. Claim 26 and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" in further view of U.S. Patent pub. 2001/0055465 A1 to Inoue.

As to claims 26 and 53, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff discloses wherein the main control unit further stores a plurality of files in an appropriate place of a divided HDD with pointers according to at least one attribute of the respective files (Col. 4, lines 35-43; Col. 10, lines 5-24). However Chan, Wolff and Li as modified do not expressly

disclose discriminatingly displaying at least one of a size of the files as stored and a remaining capacity of a memory area

Inoue discloses discriminatingly displaying at least one of a size of the files as stored and a remaining capacity of a memory area (Fig. 4, 0062-0067).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Inoue. Motivation to combine would have been to allow a user to see what amount of memory is left for him or her to use for storing programs. Resulting in a system that is able to let a user know how much remaining capacity of memory is left.

11. Claim 27 and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Pub. 2004/0001704 A1 to Chan et al. "Chan" in view of U.S. Patent No. 6,833,848 to Wolff et al. "Wolff" and in view of U.S. Patent Pub 2003/0048848 A1 to Li et al. "Li" in view of U.S. Patent Pub. 20030031181 A1 to Rowley et al. "Rowley" and in further view of U.S. Patent 5,969,719 to Tsujimoto.

As to claims 27 and 54, Chan, Wolff, Li and Rowley as modified disclose everything claimed as applied in claim 1 above. In addition Wolff wherein the main control unit further comprises: a flash memory for storing relevant link information, storing icon data in a HDD (Col. 4 lines 35-42 and Col. 12, lines 30-44). However Chan, Wolff and Li as modified do not expressly disclose providing at least one animation effect where icons are moved by using the icon data stored in the HDD.

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan and Li as modified with the teachings of Wolff. Motivation to

combine would have been to provide modeless interface where a user can simultaneously view authored stories, view/ navigate through photographs and view/create new stories.

Tsujimoto discloses providing at least one animation effect where icons are moved by using the icon data stored in the HDD (Col. 7, lines 49-67; Col. 8 line 1-4).

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine Chan, Wolff and Li as modified with the teachings of Tsujimoto. Motivation to combine would have been to provide an indication for a user to show that the icon has been selected by the user. Resulting in a system that is interesting to a user.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ASHER KHAN whose telephone number is (571)270-5203. The examiner can normally be reached on 9:00 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter-Anthony Pappas can be reached on (571)272-7646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
